

Tutorial: Match your Font

Have you ever fallen in love with a particular font but didn't know what it was named? Perhaps the text was in a magazine advertisement, on another digital scrapbooker's layout, or even on a pack of Journal Cards you received in a designer's Collection. Did you know there is an easy way to find out?

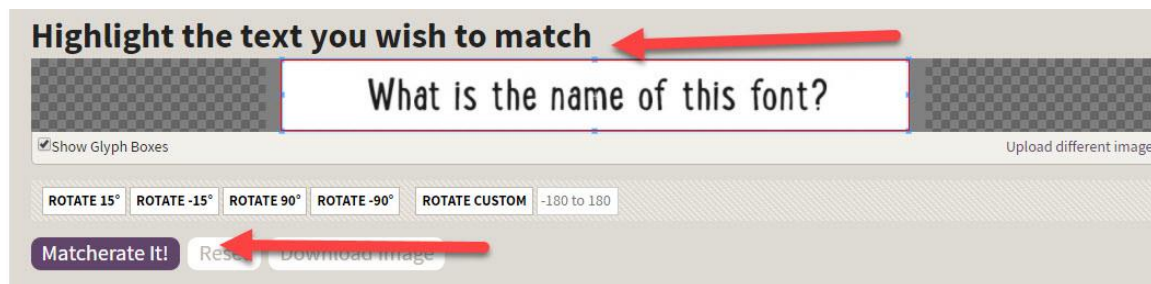

There is! And it is available at the Font Squirrel: [The Matcherator on Font Squirrel](#).

Upload an image with text to The Matcherator, and it will check 4 sites to see if the text can be matched. If the text is available at any of those 4 sites, the Matcherator will tell you where. If not, it will provide similar text alternatives. Here are some screen shots for you:

- Upload your text image

- Highlight your text, then click on the Matcherate It! button.

- Be sure all 4 Distributors are check marked, and Matcherator will start searching.

Make sure all distributors are checked. I will click on the MyFonts button to include this site in the search.

- Matcherator will then start searching, and in just a few seconds give you the search results: (red outline added by me)

Fonts that match your image:

Uniform Rounded Extra Condensed Medium

Miller Type Foundry

Fontspring - \$25.99*

And they are right. The font I used was Lunchbox. The Matcherator tells me where I can purchase this font and what the price of it is.

If the font image that I uploaded was not available at any of the 4 distributors, the Matcherator will still show me the results of similar fonts available at the 4 distributors.

So, bookmark the [Matcherator](#), to make your future font searches a breeze!

Thank you for downloading my tutorial.
